

A PRIVACY BRIEFING

FOR PARENTS • FOR EDUCATORS

The 7-Layer Privacy Stack

Rights, responsibilities, and real data sovereignty in education.

Protecting student data beyond the vendor dashboard — a clear-eyed look at what California law actually requires.

FRANK LUCIDO

LUCIDO TECHNOLOGY CONSULTING

THE ILLUSION OF COMPLIANCE

FERPA is the floor, not the ceiling.

Why standard vendor assurances fall short.

THE COMMON ASSURANCE

"FERPA
Compliant"

is not a complete privacy strategy. It's the baseline — not the destination.

FERPA DOES NOT ADDRESS:

- ✓ **Student profiling.** Behavioral data shapes that quietly follow kids.
- ✓ **"Privacy by default" for minors.** Not required at the federal level.
- ✓ **District possession & control.** No mandate to own the data.
- ✓ **Behavioral data for AI.** Often fair game for vendor training.

The 7-Layer Privacy Stack

The required standard for California schools. Any vendor claiming "full compliance" must address all of these.

FB

LAYERS 1–3

Federal Baseline

1

FERPA

Privacy of educational records (1974)

2

PPRA

Surveys & evaluations consent (1978)

3

COPPA

Children's online privacy < 13 (1998)

CA

LAYERS 4–7

California Mandates

4

SOPIPA

No ads, no profiling, no selling (2014)

5

AB 1584

District ownership of records (2014)

6

CCPA

Right to know, delete, opt out (2018)

7

AB 2273

Privacy by default, DPIAs (2022)

THE FEDERAL BASELINES

FERPA & PPRA

Access, review, and consent — the floor of student privacy.

1

LAYER 1 • 1974

FERPA

PROTECTS:

- ✓ Privacy of student **educational records**.
- ✓ **Written consent** required for disclosure.
- ✓ Right to **inspect & review** records.
- ✓ Right to **request correction** of inaccurate records.

2

LAYER 2 • 1978

PPRA

GOVERNS:

- ✓ Surveys, analyses, and evaluations funded by the U.S. Department of Education.
- ✓ Requires **parental consent** for surveys covering protected topics.
- ✓ Often **overlooked** in vendor compliance claims.

COPPA

Children's Online Privacy Protection Rule (1998)

<13

Applies to online services directed at children under 13.

Requires **verifiable parental consent** for data collection.

Crucial for any platform requiring a direct student login.

WHY IT MATTERS

Affects the day-to-day apps used in elementary and middle schools — most directly.

CALIFORNIA'S STRICT STANCE

SOPIPA

Student Online Personal Information Protection Act (2014) — where California diverges sharply from federal law.

SOPIPA EXPLICITLY PROHIBITS:

Targeted advertising using student data

Non-educational student profiles

Selling student data

CALIFORNIA BUSINESS & PROFESSIONS CODE §§ 22584–22585

Key insight: A vendor can be fully FERPA-compliant and still violate SOPIPA.

DISTRICT OWNERSHIP & CONTROL

AB 1584

Custodians vs. owners — a vital distinction for administrators.

Districts must maintain **physical control** of student records.

Vendors are **custodians, not owners**.

Contracts must **explicitly codify** district ownership.

Warning: If the contract doesn't codify ownership, it fails state law.

CCPA & AB 2273

Expanding protections to the digital age — the two newest California layers.

6

LAYER 6 · 2018

CCPA

GRANTS PARENTS & STUDENTS:

- ✓ **Right to know** what data is held.
- ✓ **Right to delete** — applied within an educational context.

7

LAYER 7 · 2022

AB 2273

REQUIRES SCHOOLS TO:

- ✓ Apply "**privacy by default**" for users under 18.
- ✓ Run **Data Protection Impact Assessments** (DPIAs).

FOR PARENTS & FAMILIES

FROM THEORY TO PRACTICE

Parent rights in action

What you can actually do — at the school site level.

- 01 **Inspect & review** your child's educational records.
- 02 **Opt out** of non-essential data collection.
- 03 **Request deletion** of specific behavioral data under CCPA.
- 04 **Demand transparency** on third-party apps.

FEDERAL · CALIFORNIA EDUCATION CODE · CCPA

You have the right to know exactly what is happening to your child's digital footprint. 09

School responsibilities

Moving from marketing promises to technical reality.

Verify **code-level access logs** — not just vendor attestations.

Compliance is an **operational discipline**, not a procurement item.

Prepare for **stringent county-level audits**.

The "free" EdTech app

A single unvetted app can violate multiple layers of the stack.

SCENARIO

A teacher downloads a "free" flashcard app for classroom use.

THE RISK

Students create accounts; the app tracks device usage and behavioral habits.

THE VIOLATION

Bypasses **AB 1584** (no contract), risks **SPIPA** violations (profiling), lacks **COPPA** verifiable consent.

Takeaway: "Free" apps cost data. A single unvetted download can compromise the entire district posture.

THE PROCUREMENT PITFALL

The vendor convenience trap

The risk of closed proprietary systems — and the open-source alternative.

SCENARIO

District relies on a proprietary vendor for all analytics.

THE RISK

Vendor is acquired, pivots, or sunsets the product.

THE REALITY

District absorbs the disruption and loses the pipeline.

THE SOLUTION

Open-source infrastructure — code stays available, workflows stay inspectable.

Takeaway: *Open source is not just a budget decision — it's a control, continuity, and resilience decision.*

THE SOLUTION · LOCAL-FIRST

TRUE DATA SOVEREIGNTY

The sovereign tech stack

Local-first data analytics for districts — the practical alternative.

The simple argument: You can't leak what you don't send.

Processing stays entirely on **district-controlled hardware**.

Uses embedded analytical engines like **DuckDB** — no cloud, no network calls.

Analyzes millions of rows locally **in under a second**.

Local AI models process queries **without external APIs**.

THE BOTTOM LINE & NEXT STEPS

SAVING BUDGETS, SECURING DATA

The economics of sovereignty

Reinvesting in the classroom.

PROPRIETARY CLOUD AI

\$50K–\$200K /year

\$375K over 5 years with no residual district asset.

LOCAL HARDWARE (MAC STUDIO CLUSTER)

\$12,000 upfront

Zero marginal cost per query — depreciable district asset.

NEXT STEPS

Assess vendor agreements · demand technical evidence · invest in sovereign infrastructure. **Questions?**
